

DOUGLASS KING SEED CO.

## Green Panicgrass (Panicum Maximum Var. Trichoglume)

A tropical perennial introduced from Africa that responds well from San Antonio south into Mexico. Emerges quickly in warm soils. Growth was 2' within 5 weeks and 5' in 90 days on well fertilized stand in South Texas. Very green lush growth that cattle relish. Green Panic is a selection from Guinea grass that grows well in areas where average annual rain-fall is at least 20 inches and up to areas that average 80 inches annually. Green Panic consistently out-yields Kleingrass by as much as 40%. Green Panic can be used as a self-seeding annual, with a certain amount of success if allowed to seed in areas where stands are damaged by cold temperatures. Excellent response to fertilization and irrigation where rainfall is below 20 inches.

**Establishment/Management:** Plant in well prepared seedbed in late spring when soil is warm; may be fall-planted in South Texas and Mexico. Plant 1/4" deep and pack soil or plant with Brillion seeder.

**Rows:** 0.8 lbs. PLS per acre in 36-40" rows. **Broadcast:** 1.5-2.0 lbs. PLS per acre.

Intermittent grazing at intervals consistent with good management practices first year. Stand will greatly increase if allowed to seed. Excellent hay if cut prior to seeding. Seed yields vary from 50-150 lbs. per care.

**Adaptation/Use:** Adapted to wide range of soils. Tolerant to wide range of moisture conditions, 20-80 inches annually. Use for grazing, hay and seed production in pure stands. Swathe, dry then combine for best results. Adaptation and use is similar to Blue Panic.
